

7-PDF Printer / MSI Package

You can install the PDF Writer using Group Policy Objects (GPO) under Active Directory. For that you need a set of MSI packages. These are the packages you should put on your distribution point and include in your GPO:

- PDF Writer - MSI Package
- Ghostscript Lite - MSI Package (free under GPL)
- Xpdf - MSI Package (free under GPL)
- PDF Power Tool - MSI Package (free under GPL)

The order of installation does not matter. However, it is important that you install all three.

MSI Command

We used the following command on windows 10 running as administrator:

```
msiexec /q /i Setup_7PDF_10_25_0_2557_PRO_EXP.msi /l* log.txt
```

It worked fine for us.
